Using Your TV and PC with Auracast

Make your TV and your PC part of the same Auracast audio system

With a simple home setup, your TV and your PC can both feed a single Auracast streamer — such as the Avantree Audikast 4. This turns Auracast into a fixed home infrastructure instead of a portable gadget. Auracast will play on Auracast hearing aids, earbuds, speakers anywhere in your home.

The Concept

- TV audio → Auracast
- PC audio → Auracast
- One broadcast → hearing aids or earbuds
- Manual source selection via a simple switch

Why a Generic Streamer Is Better

- Works with hearing aids and/or earbuds & speakers
- Supports multiple listeners at the same time using earbuds, etc
- Not tied to one hearing aid manufacturer and costs less.
- Future-ready for public Auracast venues

Auracast becomes part of your house — like WiFi — not part of a single device ecosystem.

Why Add the PC?

- Spotify • YouTube • Zoom • Plex • Web radio

- Any browser or app audio

Anything your computer can play can be broadcast. You are not limited to TV sound. You are broadcasting your entire digital environment.

How It Works

- PC → [USB-to-Optical adapter](#) → switch
- TV → [Bluetooth bridge](#) → switch (This allows use of the TV's Volume Control)
- [Switch](#) → Avantree Audikast 4
- [Audikast 4](#) → Hearing aids or earbuds (Auracast broadcast)
